

Chemistry Minor

Degree Type Minor

The minor in chemistry allows students to use this option to pursue laboratory research, education or augment their transcript for application to graduate study.

Requirements:

Students must complete five courses, for a total of 20 credits. Students must complete:

Item #	Title	Credits
CHE 101	Principles of Chemistry I (+lab)	4.0
CHE 102	Principles of Chemistry II (+lab)	4.0
CHE 307	Organic Chemistry I (+lab)	4.0
CHE 308	Organic Chemistry II (+lab)	4.0
	BIO 304 or ENV 330	4

For Biology majors who want a chemistry minor, only two courses can count for both the major and minor. CHE 307 and 308 and BIO 305 count towards this minor, so students must take PHY 101 and 102 plus another upper level BIO course to complete their biology major.
