

BIO 440 : Biomedical Research III

This course involves students in biomedical research under the supervision of faculty. Teams of students will work on their own research projects. In addition to lab work, students will learn the biological concepts underlying their projects, conduct literature reviews, discuss current literature, collaborate with appropriate colleagues and present their research at a state-wide or regional scientific conference.

Credits 4

Prerequisite Courses

[BIO 106: The Chemical and Cellular Basis of Life \(+lab\)](#)
